The **Joomla!®** project today released the latest version of one of the world's most popular **Open Source Content Management Systems (CMS)**

.

Joomla 1.6.0 comes packed with new features that will make life easier for **Web Developers, Designers and web site Administrators**

.

- **Finer access controls** for viewing and editing content with configurable user groups and viewing levels
- **A user-defined category structure**, from simple one-level to complex multi-level categories
- **Installation improvements** allowing for multiple extension installations in one package, updatable with a single click
- **Expanded language support** for easy production of multi-lingual sites
- **Start and end publishing times** for modules with more control over where they display,
- **Fresh new templates and semantic markup** to please the eye as well as the search engines
- **More creative control** through template styles
- **Hundreds of additional features**, streamlining workflow and productivity

Joomla 1.5 will still have long-term support, and as soon as our favourite Joomla extensions fully support 1.6 we will start to migrate our clients' web sites.

Joomla! 1.6 Has Arrived!
